

FACULTY OF
**ENGINEERING TECHNOLOGY
AND SCIENCE**

Engineering Technology and Science

The Faculty of Engineering Technology and Science aims to produce graduates effective in the design and practical application of engineering technology solutions. As students, they are taught the ability to lead successfully, work efficiently, and communicate effectively in a team. Their experience during the engineering undergraduate program will instill ethical values and professional standards, therefore, helping them expand their knowledge and competencies through continuing education and other lifelong learning experiences. Thus, making them significant members of the community by contributing their skills and knowledge either locally or internationally.

Employment prospects for HCT Engineering Technology and Science graduates are very strong and cover many local and international industrial sectors including:

- Aviation
- Computing
- Construction
- Consulting
- Defense
- Energy
- Governance
- Health care
- Infrastructure support and maintenance
- Manufacturing
- Oil and gas
- Telecommunications

Faculty Mission

The Mission of the Faculty of Engineering Technology and Science is to “provide world class engineering programs empowering graduates with the desire for learning, discovery and innovation, and provide highly competent technologists and engineers to meet present and future industry needs nationally and globally”. The reputation and academic integrity of Engineering Technology and Science programs at HCT is high. Most of the Bachelor of Engineering Technology programs offer a sound Diploma exit option.

Senior Staff

Executive Dean – **Dr. Mohammad-Amin Al Jarrah**

Associate Executive Dean – **Dr. Belal Sababha**

Degrees offered

The current programs being offered by the Faculty of Engineering Technology and Science are:

Programs	Offered at:
Bachelor of Aeronautical Engineering Technology	Al Ain Women's
Bachelor of Aviation Maintenance Engineering Technology: Airframe and Aeroengines	Abu Dhabi Men's, Dubai Men's
Bachelor of Aviation Maintenance Engineering Technology: Avionics	Abu Dhabi Men's, Dubai Men's
Bachelor of Chemical Engineering Technology	Abu Dhabi Men's, Ruwais Men's, Ruwais Women's
Bachelor of Civil Engineering Technology	Abu Dhabi Men's, Dubai Men's
Bachelor of Electrical Engineering Technology	Al Ain Men's, Al Ain Women's, Abu Dhabi Men's, Abu Dhabi Women's, Dubai Men's, Dubai Women's, Fujairah Men's, Fujairah Women's, Ras Al Khaimah Women's, Sharjah Men's, Sharjah Women's, Ruwais Men's, Ruwais Women's, Madinat Zayed Women's

Programs	Offered at:
Bachelor of Industrial Engineering Technology	Abu Dhabi Women's, Dubai Women's
Bachelor of Logistics Engineering Technology	Abu Dhabi Men's
Bachelor of Mechanical Engineering Technology	Al Ain Men's, Abu Dhabi Men's, Dubai Men's, Fujairah Men's, Fujairah Women's, Ras Al Khaimah Men's, Sharjah Men's, Ruwais Men's
Bachelor of Mechatronics Engineering Technology	Dubai Men's, Ras Al Khaimah Men's
Bachelor of Applied Science in Marine Engineering Technology	Abu Dhabi Men's
Bachelor of Applied Science in Marine Transport	Abu Dhabi Men's
Bachelor of Applied Science in Maritime Engineering Technology and Naval Architecture	Abu Dhabi Men's

Admission Requirements

A. Direct admission:

1. Meet general admission criteria specified in Program Placement Procedures
2. Pass a Physics Placement Test with a minimum score of 70 or has a score of 500 in SAT Subject test in Physics.

B. Conditional admission:

1. If the physics placement test requirement is not met, admission is granted upon completion of the Pre-Physics course. Meanwhile student can proceed in his major as direct admission.

C. Admission upon completion of Foundation Program:

1. Foundation students are eligible to Engineering Technology admission upon completion of the Foundation program and meeting Math requirements in Program Placement Procedures LP202.1.
2. Pass a Physics Placement Test with a minimum score of 70 or completion of the Pre-Physics course or has a minimum score of 500 in SAT Subject test in Physics.

Diploma Exit Option

- Engineering students may select the diploma track and can exit with a Diploma after completing the requirements outlined in the respective program with a minimum CGPA of 2.0.
- After completion of 40 credits in Engineering core courses and Mathematics and Science required courses (Math, Chemistry and Physics), students must have a minimum CGPA of 2.0 excluding General Studies to progress into Year 3 of the program. Students who do not meet this requirement are required to follow the Diploma track.

Completion Requirements

Bachelor Degree Completion Requirements

Students seeking the Engineering Technology Bachelor degree must successfully complete the following minimum requirements:

1. A minimum of 146 credits as shown below. (Note: For Aviation and Maritime programs, the minimum number of credits is specified in their relevant section of the Catalogue).
 - a. Program required courses including a work placement of 16 weeks: see program completion requirements.
 - b. A minimum requirement of 21 credits in Math and Science Courses. (Note: For Industrial and Logistics Programs, the minimum no. of Math and Science credits is 18).
 - c. A minimum requirement of 33 credits in General Studies Courses according to the General Studies breakdown and as advised in the recommended sequence of study for each program.
 - d. Major electives: see program elective requirements.
2. Minimum CGPA of 2.00.

Diploma Degree Completion Requirements

Students seeking the Engineering Technology Diploma degree must successfully complete the following minimum requirements:

1. Minimum number of credits as specified in the program of interest among which the following requirements need to be met:
 - a. Program required courses including a work placement of 8 weeks.
 - b. Minimum of 15 credits of Math and Science course requirements.
 - c. Minimum requirements of 27 credits in General Studies according to the General Studies breakdown and as advised in the recommended sequence of study for each program
2. Minimum CGPA of 2.00.

Department of Aeronautical Engineering Technology (AET)

Bachelor of Aeronautical Engineering Technology (BAEET)

Program Mission

Prepare graduates to be successful as technicians and engineers embracing innovation and discovery and striving for life-long learning and professional development in the field of Aeronautical Engineering Technology.

Program Description

The Bachelor of Aeronautical Engineering Technology program provides an excellent, broad education with a focused area of specialization options to cater for the UAE's globally-oriented aircraft industry. Aeronautical Engineering Technology graduates are trained to support the design, development, and maintenance of aviation systems to the highest level of industry standards. HCT Aeronautical Engineers are trained to use state-of-the-art software and hardware to enhance their analytical and practical skills in aero-engineering to equip them with essential tools and skills to strengthen their career opportunities and facilitate their entry into the industrial world. The Bachelor of Aeronautical Engineering Technology curriculum produces high-quality engineers known for productivity, timeliness, dedication and competence in the workplace. Graduates have the ability to work logically, accurately and efficiently; to gather and use information effectively; and to continue enhancing their careers through lifelong learning. The program stresses the effective use of technology, information resources and engineering tools. It also instills leadership qualities based on moral and ethical principles, coupled with sound and rational judgment. In addition, it is designed to prepare interested students for graduate studies in Aeronautical Engineering Technology and other areas of professional practice.

Students will have the option to graduate with a Diploma in Aeronautical Engineering Technology upon the successful completion of 81 credits inclusive of the 8 week Work Placement.

Program Educational Objectives

The Program Educational Objectives of the Bachelor of Aeronautical Engineering Technology (BAEET) program are to:

1. Provide Aeronautical Engineering Technology professionals with the technical knowledge and skills required by the industry to develop, design, and maintain aviation systems to highest level of industry standards.
2. Prepare graduates for a successful career as effective decision makers with strong communication and teamwork skills and an understanding of the global, ethical and social implications of the industry and aero-

engineering profession.

3. Provide graduates with strong commitment to lifelong learning, continuing education, and professional growth.
4. Provide graduates with leadership qualities and commitment to contribute actively to achieving the Abu Dhabi Vision 2030.

Program Learning Outcomes

Upon graduation, a HCT graduate in Bachelor of Aeronautical Engineering Technology (BAEET) should demonstrate:

- a. an ability to select and apply the knowledge, techniques, skills, and modern tools of aeronautical engineering technology to broadly-defined engineering technology activities;
- b. an ability to select and apply a knowledge of mathematics, science, engineering, and technology to aeronautical engineering technology problems that require the application of principles and applied procedures or methodologies;
- c. an ability to conduct standard tests and measurements; to conduct, analyze, and interpret experiments; and to apply experimental results to improve processes;
- d. an ability to design systems, components, or processes for broadly-defined aeronautical engineering technology problems appropriate to program educational objectives;
- e. an ability to function effectively as a member or leader of a technical team;
- f. an ability to identify, analyze, and solve broadly-defined aeronautical engineering technology problems;
- g. an ability to apply written, oral, and graphical communication in both technical and non-technical environments and an ability to identify and use appropriate technical literature;
- h. an understanding of the need for and an ability to engage in self-directed continuing professional development;
- i. an understanding of and a commitment to address professional and ethical responsibilities including a respect for diversity;
- j. a knowledge of the impact of engineering technology solutions in a societal and global context; and
- k. a commitment to quality, timeliness, and continuous improvement.

Completion Requirements

Students seeking the Bachelor of Aeronautical Engineering Technology degree must successfully complete the following minimum requirements:

1. A minimum of 146 credits, as follows:
 - a. A minimum requirement of 92 credits of the program major as follows:
 - a minimum of 80 core courses including Work Placement for 16 weeks
 - a minimum of 12 credits in the electives of the major
 - b. A minimum of 21 credits of Math and Science requirements
 - c. A minimum requirement of 33 credits in General Studies according to the General Studies breakdown and as advised in the study plan of the program.
2. A minimum CGPA of 2.00.

Course Credits

Diploma in Aeronautical Engineering Technology (DAEET)

Program Mission

Working in partnership with industry, the Diploma in Aeronautical Engineering Technology program provides quality education that prepares highly skilled technicians capable of serving the community and fulfilling personal ambitions with excellence. Graduates may choose to continue into the additional two years of the program to become innovative engineers.

Program Educational Objectives

The Program Educational Objectives of the Diploma in Aeronautical Engineering Technology (DAEET) program are to:

1. Provide Aeronautical Engineering Technology professionals with the technical knowledge and skills required by the industry to maintain aviation systems to highest level of industry standards.
2. Prepare graduates for a successful career with strong communication and teamwork skills and an understanding of the global, ethical and social implications of the aviation industry.
3. Provide graduates with strong commitment to lifelong learning, continuing education, and professional growth.

Program Learning Outcomes

Upon graduation, a HCT graduate in Diploma in Aeronautical Engineering Technology (DAEET) should demonstrate:

- a. an ability to apply the knowledge, techniques, skills, and modern tools of aeronautical engineering to narrowly defined engineering technology activities;
- b. an ability to apply a knowledge of mathematics, science, engineering, and technology to aeronautical engineering technology problems that require limited application of principles but extensive practical knowledge;
- c. an ability to conduct standard tests and measurements, and to conduct, analyze, and interpret experiments;
- d. an ability to function effectively as a member of a technical team;
- e. an ability to identify, analyze, and solve narrowly defined aeronautical engineering technology problems;
- f. an ability to apply written, oral, and graphical communication in both technical and non-technical environments; and an ability to identify and use appropriate technical literature;
- g. an understanding of the need for and an ability to engage in self-directed continuing professional development;
- h. an understanding of and a commitment to address professional and ethical responsibilities, including a respect for diversity; and
- i. a commitment to quality, timeliness, and continuous improvement

Completion Requirements

Students seeking the Diploma in Aeronautical Engineering Technology degree must successfully complete the following minimum requirements:

1. A minimum of 81 credits, as follows:

- 39 credits of the program major, including Work Placement for 8 weeks
- A minimum of 15 credits of Math and Science course requirements
- A minimum of 27 credits of the General Studies requirements according to the General Studies breakdown.

2. A minimum CGPA of 2.00

Department of Aviation Maintenance Engineering Technology (AVET and AAET)

Bachelor of Aviation Maintenance Engineering Technology: Airframe and Aeroengines (BAVET)

Program Mission

Prepare graduates to be successful as technicians and engineers embracing innovation and discovery and striving for life-long learning and professional development in the field of Aviation Maintenance Engineering Technology.

Program Description

The Bachelor of Aviation Maintenance Engineering Technology: Airframe and Aeroengines (BAVET) program articulates into the GCAA licensed outcome which is approved by the General Civil Aviation Authority (GCAA) UAE (CAR 147/02/2009). The program provides the graduates with excellent knowledge and skills to work effectively and professionally in the aviation community. Furthermore, it has the important element of broad education and continuous lifelong learning abilities.

Graduates can take positions in the aviation industry and can work individually or in teams to practically apply Aviation Maintenance skills and solutions with consideration of the industry regulations and ethics. Students will graduate with a Bachelor degree and after a further two years industry experience and meeting the General Civil Aviation Authority requirements they will have a license of category 'B1.1' (Airframe and Aeroengines). They also have the option to exit the program with an associate degree after completion of the second year (see associate degree requirements and conditions stated below). Employment opportunities for aviation graduates within the UAE, Gulf region and worldwide are abundant and expanding. Employment opportunities include military operations, state commercial operations, private aviation operations and aviation supporting industries and logistics.

The program curriculum covers all aviation maintenance training modules required by the General Civil Aviation Authority (GCAA) and are compatible with European Aviation Safety Agency (EASA). The program also has the main and important engineering courses and the General Studies courses which will prepare the students to be competent engineers and productive educated professionals. Graduates will be ready for positions as aviation engineers and technicians with the technical and managerial skills necessary to enter careers in aviation maintenance, management, and operations. Students will gain the required practical knowledge and skills through labs, practical assignments and work placements.

The curriculum aims to produce high-quality engineers known for productivity, timeliness, dedication, and competence in the workplace. Graduates have the ability to work logically, accurately and efficiently; to gather and use information effectively; and to continue enhancing their careers through lifelong learning. The program stresses the effective use of technology, information resources and engineering tools. The program provides leadership qualities

based on moral and ethical principles coupled with sound and rational judgment. Finally, the program is designed to prepare motivated students for graduate studies in Aviation Engineering and other related areas of professional practices.

Students will have the option to graduate with a Diploma in Aviation Maintenance Engineering Technology (Airframe and Aeroengines) upon the successful completion of 77 credits inclusive of the 8 week Work Placement.

Program Educational Objectives

The Program Educational Objectives of the Bachelor of Aviation Maintenance Engineering Technology: Airframe and Aeroengines program are to:

1. Provide aviation graduates with the technical knowledge and skills required by the aviation industry to maintain a variety of aircraft systems to the highest standards.
2. Prepare graduates for a successful career as effective decision makers with strong communication and teamwork skills and an understanding of the global, ethical and social implications of the aviation industry and engineering profession.
3. Prepare graduates with a strong commitment to lifelong learning, continuing education and professional growth.
4. Provide graduates with leadership qualities and commitment to contribute actively to achieving the regulatory authorities' mission.

Program Learning Outcomes

Upon graduation, a HCT graduate in Bachelor of Aviation Maintenance Engineering Technology: Airframe and Aeroengines program should demonstrate:

- a. an ability to integrate and utilize theoretical and practical knowledge on mathematics, natural sciences and aviation maintenance engineering to offer engineering solutions.
- b. an ability to identify, explain, formulate and solve aviation maintenance engineering problems; select and apply appropriate analytical methods and modeling techniques.
- c. an ability to apply the acquired comprehensive theoretical and practical knowledge in accordance with the national and international aviation authorities' regulations and manufacturer's instructions.
- d. a comprehensive knowledge on the forensic, communal and environmental framework in which the aviation operations are conducted.
- e. an ability to analyze a system, a system component or a process; utilize advanced design methods to meet the defined requirements under realistic constraints.
- f. an ability to identify and analyze problems, propose solutions based on research, proof and results from different sources and measurements; develop

- appropriate corrective action.
- g. an ability to use computer software, information and communication technologies at a level required by aviation maintenance engineering technology.
 - h. an understanding of the need for lifelong learning; an ability to learn new developments in science and technology, access information, review literature, and make conclusions.
 - i. an ability to propose, build and lead team works in engineering projects related to aircraft maintenance technology.
 - j. an ability to conduct standard tests and measurements; to conduct, analyze, and interpret experiments; and to apply experimental results to improve processes.
 - k. an ability to communicate effectively in writing, orally, and graphically and an ability to identify and use appropriate technical literature.
 - l. an understanding of the need for and an ability to engage in self-directed continuing professional development.
 - m. an understanding of and a commitment to address professional and ethical responsibilities including a respect for diversity.
 - n. a knowledge of the impact of engineering technology solutions in a societal and global context.
 - o. a commitment to quality, timeliness, and continuous improvement.

Completion Requirements

Students seeking the Bachelor of Aviation Maintenance Engineering Technology: Airframe and Aeroengines degree must successfully complete the following requirements:

1. A minimum of 150 credits which are divided as follows:
 - a. Major requirements of 99 credits as specified by program core requirements.
 - b. Aviation Program work placement is as follows:
 - Work placement I and II are 8 weeks each. HCT will use its best endeavors to provide work placement opportunities. However, HCT is not able to guarantee work-placement positions.
 - Students requiring a Certificate of Recognition (COR) at the completion of the program will be required to complete approximately 300 hours of the above-mentioned Work Placement in an “actual maintenance working environment”.
 - c. A minimum requirement of 18 credits in Math and Science courses.
 - d. A minimum requirement of 33 credits in General Studies according to the General Studies breakdown.
2. Minimum CGPA of 2.00.
3. Successfully complete 60% of the GCAA license exams.

Diploma in Aviation Maintenance Engineering Technology: Airframe and Aeroengines (DAVET)

License Requirement

After exiting the Aviation Maintenance Engineering Technology program with the diploma, students could continue training for aviation maintenance licenses in accordance with GCAA regulations (CAR 66.25). The graduate would be required to complete an additional 10 modules in a self-study program, with the examinations carried out at HCT under the provisions of GCAA as an approved Examination Centre. The entire course must be completed within a 10 year period. Refer to www.gcaa.gov.ae (E-Publications – (CAR's-CAR Part II- Chapter 7)) for full details and specific information.

Program Mission

Working in partnership with industry, the Diploma in Aviation Maintenance Engineering Technology (Airframe & Aeroengines) program provides quality education that prepares highly skilled technicians capable of serving the community and fulfilling personal ambitions with excellence. Graduates may choose to continue into the additional two years of the program to become innovative engineers.

Program Educational Objectives

The Program Educational Objectives of the Diploma in Aviation Maintenance Engineering Technology: Airframe and Aeroengines program are to:

1. Provide aviation graduates with the technical knowledge and skills required by the aviation industry to maintain a variety of aircraft systems to the highest standards.
2. Prepare graduates for a successful career with strong communication and teamwork skills and an understanding of the global, ethical and social implications of the aviation industry.
3. Prepare graduates with a strong commitment to lifelong learning, continuing education and professional growth.
4. Provide graduates the commitment to contribute actively to achieving the regulatory authorities' mission.

Program Learning Outcomes

Upon graduation, a HCT graduate in Diploma in Aviation Maintenance Engineering Technology: Airframe and Aeroengines program should demonstrate:

- a. an ability to integrate and utilize basic theoretical and practical knowledge on mathematics, natural sciences and aviation maintenance engineering in the workplace.
- b. an ability to identify, explain, formulate and solve basic aviation maintenance engineering problems;
- c. an ability to apply the acquired basic theoretical and practical knowledge in accordance with regulations and

manufacturer's instructions.

- d. a basic knowledge on the communal and environmental framework in which the aviation operations are conducted.
- e. an ability to use computer software, information and communication technologies at a level required for basic aviation maintenance.
- f. an ability to conduct standard tests and measurements.
- g. an ability to communicate effectively in writing, orally, and graphically.
- h. an understanding of the need for and an ability to engage in self-directed continuing professional development.
- i. an understanding of and a commitment to address professional and ethical responsibilities
- j. a commitment to quality, timeliness, and continuous improvement.

Completion Requirements

Students seeking the Diploma degree in Aviation Maintenance Engineering Technology: Airframe & Aeroengines must successfully complete a minimum of 77 credits, as follows:

- a. Program major requirements of 38 credits, including AVT 1003 and a work placement for 8 weeks. HCT will use its best endeavors to provide work placement opportunities, however HCT is not able to guarantee work-placement positions.
- b. Math and Science requirements of 15 credits.
- c. General Studies' requirements of 24 credits according to the General Studies breakdown.

Course Credits

Core Courses**Required Credits: 38**

AVT 1003	Aviation Mathematics and Physics	3
AVT 2103	DC Electrical Fundamentals	3
AVT 2113	AC Electrical Fundamentals and Electrical Machines	3
AVT 2203	Workshop Practices and Safety	3
AVT 2213	Aircraft Materials	3
AVT 2223	Aircraft Hardware	3
AVT 2233	Maintenance Procedures and Abnormal Events	3
AVT 2243	Electrical Wiring Standards and Practices	3
AVT 2303	Aircraft Fundamentals and Basic Aerodynamics	3
AVT 2806	Work Placement I for Aviation	6
AVT 2902	Sophomore Design Project	2
EGN 1133	Design Thinking in Technology	3

Mathematics and Science Courses**Required Credits: 15**

CHM 1103	Engineering Chemistry	3
MTH 1103	Pre Calculus	3
MTH 1203	Calculus I	3
MTH 2103	Calculus II	3
PHY 1203	Physics II	3

General Studies Courses**Required Credits: 24**

English, Arabic or other Languages	9
Humanities or Arts: AES 1003 Emirati Studies	3
Information Technology and Mathematics: MTH 1113 Statistics for Engineering	3
The Natural Sciences: PHY 1103 Physics I	3
The Social or Behavioral Sciences	6

Bachelor of Aviation Maintenance Engineering Technology: Avionics (BAAET)

Program Mission

Prepare graduates to be successful as technicians and engineers embracing innovation and discovery and striving for life-long learning and professional development in the field of Aviation Maintenance Engineering Technology.

Program Description

The Bachelor of Aviation Maintenance Engineering Technology: Avionics (BAAET) program articulates into the GCAA licensed outcome which is approved by the General Civil Aviation Authority (GCAA) UAE (CAR 147/02/2009). The program provides the graduates with excellent knowledge and skills to work effectively and professionally in the aviation community. Furthermore, it has the important element of broad education and continuous lifelong learning abilities.

Graduates can take positions in the aviation industry and can work individually or in teams to practically apply avionics maintenance skills and solutions with consideration of the industry regulations and ethics. Students will graduate with a Bachelor degree and after a further two years industry experience and meeting the General Civil Aviation Authority requirements they will have a license of category 'B2' (Avionics). They also have the option to exit the program with a diploma degree after completion of the second year (see diploma degree requirements and conditions stated below). Employment opportunities for aviation graduates within the UAE, Gulf region and worldwide are abundant and expanding. Employment opportunities include military operations, state commercial operations, private aviation operations and aviation supporting industries and logistics.

The program curriculum covers all avionics maintenance training modules required and licensed by the General Civil Aviation Authority (GCAA) and compatible with European Aviation Safety Agency (EASA). The program also has the main and important engineering courses and the General Studies courses which will prepare the students to be competent engineers and productive educated professionals. Graduates will be ready for positions as aviation engineers and technicians with the technical and managerial skills necessary to enter careers in aviation maintenance, management, and operations. Students will gain the required practical knowledge and skills through labs, practical assignments and work placements.

The curriculum aims to produce high-quality engineers known for productivity, timeliness, dedication, and competence in the workplace. Graduates have the ability to work logically, accurately and efficiently; to gather and use information effectively; and to continue enhancing their careers through lifelong learning. The program stresses the effective use of technology, information resources and engineering tools. The program provides leadership qualities based on moral and ethical principles coupled with sound

and rational judgment. Finally, the program is designed to prepare motivated students for graduate studies in Aviation Engineering and other related areas of professional practices.

Students will have the option to graduate with a Diploma in Aviation Maintenance Engineering Technology (Avionics) upon the successful completion of 77 credits inclusive of the 8 week Work Placement.

Program Educational Objectives

The Program Educational Objectives of the Bachelor of Aviation Maintenance Engineering Technology: Avionics program are to:

1. Provide aviation graduates with the technical knowledge and skills required by the aviation industry to maintain a variety of aircraft systems to the highest standards.
2. Prepare graduates for a successful career as effective decision makers with strong communication and teamwork skills and an understanding of the global, ethical and social implications of the aviation industry and engineering profession.
3. Prepare graduates with a strong commitment to lifelong learning, continuing education and professional growth.
4. Provide graduates with leadership qualities and commitment to contribute actively to achieving the regulatory authorities' mission.

Program Learning Outcomes

Upon graduation, a HCT graduate in Bachelor of Aviation Maintenance Engineering Technology: Avionics program should demonstrate:

- a. an ability to integrate and utilize theoretical and practical knowledge on mathematics, natural sciences and avionics maintenance engineering to offer engineering solutions.
- b. an ability to identify, explain, formulate and solve avionics maintenance engineering problems; select and apply appropriate analytical methods and modeling techniques.
- c. an ability to apply the acquired comprehensive theoretical and practical knowledge in accordance with the national and international aviation authorities' regulations and manufacturer's instructions.
- d. a comprehensive knowledge on the forensic, communal and environmental framework in which the aviation operations are conducted.
- e. an ability to analyze a system, a system component or a process; utilize advanced design methods to meet the defined requirements under realistic constraints.
- f. an ability to identify and analyze problems, propose solutions based on research, proof and results from different sources and measurements; develop appropriate corrective action.
- g. an ability to use computer software, information and communication technologies at a level required by aviation maintenance engineering technology.

- h. an understanding of the need for lifelong learning; an ability to learn new developments in science and technology, access information, review literature, and make conclusions.
- i. an ability to propose, build and lead team works in engineering projects related to avionics maintenance technology.
- j. an ability to conduct standard tests and measurements; to conduct, analyze, and interpret experiments; and to apply experimental results to improve processes.
- k. an ability to communicate effectively in writing, orally, and graphically and an ability to identify and use appropriate technical literature.
- l. an understanding of the need for and an ability to engage in self-directed continuing professional development.
- m. an understanding of and a commitment to address professional and ethical responsibilities including a respect for diversity.
- n. a knowledge of the impact of engineering technology solutions in a societal and global context.
- o. a commitment to quality, timeliness, and continuous improvement.

Completion Requirements

Students seeking the Bachelor of Aviation Maintenance Engineering Technology (Avionics) degree must successfully complete the following requirements:

1. A minimum of 150 credits which are divided as follows:
 - a. Program major requirements of 99 credits as specified by program core requirements.
 - b. Aviation Program Work Placement is as follows:
 - Work placement I and II are 8 weeks each. HCT will use its best endeavors to provide work placement opportunities. However, HCT is not able to guarantee work-placement positions.
 - Students requiring a Certificate of Recognition (COR) at the completion of the program will be required to complete approximately 300 hours of the above-mentioned Work Placement in an “actual maintenance working environment”.
 - c. A minimum requirement of 18 credits of Math and Science courses.
 - d. General Studies requirements of 33 credits according to the General Studies breakdown and as advised in the study plan of the program.
2. Minimum CGPA of 2.00.
3. Successful completion of 60% of the GCAA license exams

Diploma in Aviation Maintenance Engineering Technology: Avionics (DAAET)

License Requirement

After exiting the Aviation Maintenance Engineering Technology program with the diploma, students could continue training for aviation maintenance licenses in accordance with GCAA regulation (CAR 66.25). The graduate would be required to complete an additional 9 modules in a self-study program, with the examinations carried out at HCT under the provisions of GCAA as an approved Examination Centre. The entire course must be completed within a 10-year period. Refer to www.gcaa.gov.ae (E-Publications – CAR's-CAR Part II- Chapter 7) for full details and specific information.

Program Mission

Working in partnership with industry, the Diploma in Aviation Maintenance Engineering Technology (Avionics) program provides quality education that prepares highly skilled technicians capable of serving the community and fulfilling personal ambitions with excellence. Graduates may choose to continue into the additional two years of the program to become innovative engineers.

Program Educational Objectives

The Program Educational Objectives of the Diploma in Aviation Maintenance Engineering Technology: Avionics program are to:

1. Provide aviation graduates with the technical knowledge and skills required by the aviation industry to maintain a variety of aircraft systems to the highest standards.
2. Prepare graduates for a successful career with strong communication and teamwork skills and an understanding of the global, ethical and social implications of the aviation industry.
3. Prepare graduates with a strong commitment to lifelong learning, continuing education and professional growth.
4. Provide graduates the commitment to contribute actively to achieving the regulatory authorities' mission.

Program Learning Outcomes

Upon graduation, a HCT graduate in Diploma in Aviation Maintenance Engineering Technology: Avionics program should demonstrate:

- a. an ability to integrate and utilize basic theoretical and practical knowledge on mathematics, natural sciences and aviation maintenance engineering in the workplace.
- b. an ability to identify, explain, formulate and solve basic aviation maintenance engineering problems;
- c. An ability to apply the acquired basic theoretical and practical knowledge in accordance with regulations and manufacturer's instructions.
- d. a basic knowledge on the communal and environmental

framework in which the aviation operations are conducted.

- e. an ability to use computer software, information and communication technologies at a level required for basic aviation maintenance.
- f. an ability to conduct standard tests and measurements.
- g. an ability to communicate effectively in writing, orally, and graphically.
- h. an understanding of the need for and an ability to engage in self-directed continuing professional development.
- i. an understanding of and a commitment to address professional and ethical responsibilities
- j. a commitment to quality, timeliness, and continuous improvement.

Completion Requirements

Students seeking the Diploma degree in Aviation Maintenance Engineering Technology (Avionics) must successfully complete a minimum of 77 credits, as follows:

- a. Program Major requirements of 38 credits, including AVT 1003 and a work placement of 8 weeks. HCT will use its best endeavors to provide work placement opportunities, however HCT is not able to guarantee work-placement positions.
- b. 15 credits of Math and Science courses.
- c. General Studies requirements of 24 credits according to the General Studies breakdown

Program Mission

Prepare graduates to be successful as technicians and engineers embracing innovation and discovery and striving for life-long learning and professional development in the field of Chemical Engineering Technology.

Program Description

The Bachelor of Chemical Engineering Technology program provides an excellent broad education with a focused area of specialization options to cater to the global and local industries. The Bachelor of Chemical Engineering Technology curriculum covers the laws of chemistry, physics, and mathematics which form the basis of many industrial processes in areas such as energy, oil and gas, chemical processing, etc. The program prepares students for positions as engineers with the technical and managerial skills necessary to enter careers in the design, manufacturing, operation, and maintenance of chemical processes. Students will gain practical knowledge in heat and mass transfer in plants and process control design projects. The Bachelor of Chemical Engineering Technology curriculum produces high-quality engineers known for productivity, timeliness, dedication, and competence in the workplace.

Graduates typically have strengths in applied design, development, and implementation of chemical engineering systems. They have the ability to work logically, accurately and efficiently; to gather and use information effectively; and to continue enhancing their careers through lifelong learning. The program stresses the effective use of technology, information resources and engineering tools. The program instills leadership qualities based on moral and ethical principles coupled with sound and rational judgment. Finally, the program is designed to prepare interested students for graduate studies in Chemical Engineering Technology and other related areas of professional practice.

Students will have the option to graduate with a Diploma in Chemical Engineering Technology upon the successful completion of 81 credits inclusive of the 8 week Work Placement.

Program Educational Objectives

The Program Educational Objectives of the Bachelor of Chemical Engineering Technology program are to:

1. Provide chemical engineering professionals with the technical knowledge and skills required by the industry to perform to highest level of industry standards.
2. Prepare graduates for a successful career as effective decision makers with strong communication and teamwork skills and an understanding of the global, ethical and social implications of the industry and engineering profession.
3. Prepare graduates with strong commitment and strategic mindset to lifelong learning, continuing education, and professional growth.
4. Prepare graduates with leadership qualities and commitment to contribute actively in achieving Abu Dhabi Vision 2030.

Program Learning Outcomes

Upon graduation, a HCT graduate in Bachelor of Chemical Engineering Technology should demonstrate:

- a. an ability to select and apply the knowledge, techniques, skills, and modern tools of chemical engineering to broadly-defined engineering technology activities;
- b. an ability to select and apply a knowledge of mathematics, science, engineering, and technology to chemical engineering technology problems that require the application of principles and applied procedures or methodologies;
- c. an ability to conduct standard tests and measurements; to conduct, analyze, and interpret experiments; and to apply experimental results to improve processes;
- d. an ability to design systems, components, or processes for broadly-defined Chemical Engineering technology problems appropriate to program educational objectives;
- e. an ability to function effectively as a member or leader on a technical team;
- f. an ability to identify, analyze, and solve broadly-defined chemical engineering technology problems;
- g. an ability to apply written, oral, and graphical communication in both technical and non-technical environments; and an ability to identify and use appropriate technical literature;
- h. an understanding of the need for and an ability to engage in self-directed continuing professional development;
- i. an understanding of and a commitment to address professional and ethical responsibilities including a respect for diversity;
- j. a knowledge of the impact of engineering technology solutions in a societal and global context; and
- k. a commitment to quality, timeliness, and continuous improvement.

Completion Requirements

Students seeking the Bachelor of Chemical Engineering Technology degree must successfully complete the following minimum requirements:

1. A minimum of 146 credits, as follows:
 - a. A minimum requirement of 92 credits of the program major as follows:
 - a minimum of 80 core courses including Work Placement for 16 weeks
 - a minimum of 12 credits in electives of the major
 - b. A minimum requirement of 21 credits in Math and Science courses
 - c. A minimum requirement of 33 credits in General Studies according to the General Studies breakdown and as advised in the study plan of the program.
2. A minimum CGPA of 2.00.

Diploma in Chemical Engineering Technology (DCHET)

Program Mission

Working in partnership with industry, the Diploma in Chemical Engineering Technology program provides quality education that prepares highly skilled technicians capable of serving the community and fulfilling personal ambitions with excellence. Graduates may choose to continue into the additional two years of the program to become innovative engineers.

Program Educational Objectives

1. The Program Educational Objectives of the Diploma in Chemical Engineering Technology program are to:
2. Provide chemical engineering professionals with the technical knowledge and skills required by the industry to perform to industry standards.
3. Prepare graduates for a successful career with strong communication and teamwork skills, work ethics in the practice of engineering profession.
4. Prepare graduates with strong commitment to lifelong learning, continuing education, and professional growth.

Program Learning Outcomes

The Program Learning Outcomes of the Diploma in Chemical Engineering Technology program are to:

- a. an ability to apply the knowledge, techniques, skills, and modern tools of chemical engineering to narrowly defined engineering technology activities;
- b. an ability to apply a knowledge of mathematics, science, engineering, and technology to chemical engineering technology problems that require limited application of principles but extensive practical knowledge;
- c. an ability to conduct standard tests and measurements, and to conduct, analyze, and interpret experiments;
- d. an ability to function effectively as a member of a technical team;
- e. an ability to identify, analyze, and solve narrowly defined chemical engineering technology problems;
- f. an ability to apply written, oral, and graphical communication in both technical and non-technical environments and an ability to identify and use appropriate technical literature;
- g. an understanding of the need for and an ability to engage in self-directed continuing professional development;
- h. an understanding of and a commitment to address professional and ethical responsibilities, including a respect for diversity; and
- i. a commitment to quality, timeliness, and continuous improvement.

Completion Requirements

Students seeking the Diploma in Chemical Engineering Technology degree must successfully complete the following minimum requirements:

1. A minimum of 81 credits, as follows:

- A minimum requirement of 42 credits of the program major, including Work Placement for 8 weeks.
 - A minimum requirement of 12 credits in Math and Science courses.
 - A minimum requirement of 27 credits in General Studies according to the General Studies breakdown.
2. A minimum CGPA of 2.00.

Department of Civil Engineering Technology (CVET)

Bachelor of Civil Engineering Technology (BCVET)

Program Mission

Working in partnership with industry, the Civil Engineering Technology four years Program provides quality education that prepares innovative engineers capable of serving the community and fulfilling personal ambitions with excellence. The department also strives to produce highly skilled civil engineering technicians after completing the first two years of the program.

Program Description

The Bachelor of Civil Engineering Technology program covers different streams in Civil Engineering including planning and design of buildings, bridges, transportation systems, water resources and supply, with particular attention to protection of the environment. It prepares students for positions as engineers with the technical and managerial skills necessary to enter careers in planning, design, construction, operation and maintenance of infrastructure in a sustainable environment. Civil Engineering Technology provides an excellent broad education with specialized areas to serve the needs of the global UAE industry. The curriculum produces high-quality engineers known for productivity, professionalism, and competence in the workplace. Graduates will have the ability to analyze and design systems, specify project methods and materials, perform cost estimates and analyses, and manage technical tasks in support of both public and private sector organizations in Civil Engineering construction.

The graduates will have the ability to work professionally and efficiently; to gather and use information effectively. The program instills leadership qualities based on moral and ethical principles coupled with sound and rational judgment. The program stresses the effective use of technology, information resources and engineering tools. Additionally, the program is designed to prepare students for graduate studies in Civil Engineering Technology and other areas of professional practice.

This program offers elective concentrations in Structures Engineering, Water and Environmental Engineering and Transportation Engineering. Students will have the option to graduate with a Diploma in Civil Engineering Technology upon the successful completion of 79 credits inclusive of the 8 week Work Placement.

Program Educational Objectives

The Program Educational Objectives of the Bachelor of Civil Engineering Technology Program are to provide graduates:

1. With the technical knowledge and skills required by the industry to professionally develop, design, construct, operate, and maintain projects in areas of the built environment and global infrastructures.
2. Equipped for lifelong learning, professional development, and adhering to international Code of Ethics.
3. Capable to engage in sustainable activities through community and work-based opportunities.
4. With effective leadership, team building, and communication skills.

Program Learning Outcomes

Upon graduation, a HCT graduate in Bachelor of Civil Engineering Technology should demonstrate:

- a. an ability to select and apply the knowledge, techniques, skills, and modern tools of Civil Engineering to broadly-defined engineering technology activities;
- b. an ability to select and apply a knowledge of mathematics, science, engineering, and technology to Civil Engineering technology problems that require the application of principles and applied procedures or methodologies;
- c. an ability to conduct standard tests and measurements; to conduct, analyze, and interpret experiments; and to apply experimental results to improve processes;
- d. an ability to design systems, components, or processes for broadly-defined Civil Engineering technology problems appropriate to program educational objectives;
- e. an ability to function effectively as a member or leader on a technical team;
- f. an ability to identify, analyze, and solve broadly-defined Civil Engineering technology problems;
- g. an ability to apply written, oral, and graphical communication in both technical and non-technical environments; and an ability to identify and use appropriate technical literature;
- h. an understanding of the need for and an ability to engage in self-directed continuing professional development;
- i. an understanding of and a commitment to address professional and ethical responsibilities including a respect for diversity;
- j. a knowledge of the impact of engineering technology solutions in a societal and global context; and
- k. a commitment to quality, timeliness, and continuous improvement.

Completion Requirements

Students seeking the Bachelor of Civil Engineering Technology degree must successfully complete the following

minimum requirements:

1. A minimum of 146 credits, as follows:
 - a. A minimum requirement of 92 credits of the program major as follows:
 - a minimum of 77 core courses including Work Placement for 16 weeks
 - a minimum of 15 credits of electives in the major
 - b. A minimum requirement of 21 credits in Math and Science courses.
 - c. A minimum requirement of 33 credits in General Studies according to the General Studies breakdown and as advised in the study plan of the program.
2. A minimum CGPA of 2.00.

Department of Electrical Engineering Technology (ELET)

Bachelor of Electrical Engineering Technology (BELET)

Program Mission

The Electrical Engineering Technology program produces highly qualified Electrical Engineers and technicians with state of the art knowledge, technical and leadership skills. The program prepares its graduates to embrace innovation and discovery, strive for lifelong learning, and constantly seek professional development to best serve the Electrical Engineering profession and society.

Program Description

The Bachelor of Electrical Engineering Technology program provides an excellent broad education with a focused area of specializations options to cater for the global UAE industry. The program graduates are trained to support power generation, transmission, distribution, and control of electric energy systems and related equipment. HCT Electrical engineers are trained to use state of the art software and hardware to rapidly prototype and test potential product design. They gain experience in circuits, semiconductor devices, digital systems, programming, microcontrollers, power systems, industrial instrumentation, and system control. The Bachelor of Electrical Engineering Technology curriculum produces high-quality engineers known for productivity, timeliness, dedication, and competence in the workplace. Graduates have the ability to work logically, accurately and efficiently; to gather and use information effectively; and to continue enhancing their careers through lifelong learning. The program stresses the effective use of technology, information resources and engineering tools. The program instills leadership qualities based on moral and ethical principles coupled with sound and rational judgment. Finally, the program is designed to prepare interested students for graduate studies in electrical, electronics, communication and control engineering and other areas of professional practice.

This program offers elective concentrations in Power Engineering Technology, Communication Engineering Technology, Electronics Engineering Technology and Control and Instrumentation Engineering Technology. Students will have the option to graduate with a Diploma in Electrical Engineering Technology upon the successful completion of 81 credits inclusive of the 8 week Work Placement.

Program Educational Objectives

The Program Educational Objectives of the Bachelor of Electrical Engineering Technology program are to:

1. Provide electrical engineering professionals with the

technical knowledge and skills required by the industry to develop, design, and maintain electrical systems to the highest level of industry standards.

2. Prepare graduates for a successful career as effective decision makers with strong communication and teamwork skills and an understanding of global, ethical and social implications of the industry and Electrical Engineering profession.
3. Provide graduates with strong commitment to lifelong learning, continuing education, and professional growth.
4. Provide graduates with leadership qualities and commitment to contribute actively to achieving the Abu Dhabi Vision 2030.

Program Learning Outcomes

Upon graduation, a HCT graduate in Bachelor of Electrical Engineering Technology should demonstrate:

- a. an ability to select and apply the knowledge, techniques, skills, and modern tools of electrical engineering to broadly-defined engineering technology activities;
- b. an ability to select and apply a knowledge of mathematics, science, engineering, and technology to electrical engineering technology problems that require the application of principles and applied procedures or methodologies;
- c. an ability to conduct standard tests and measurements; to conduct, analyze, and interpret experiments; and to apply experimental results to improve processes;
- d. an ability to design systems, components, or processes for broadly-defined electrical engineering technology problems appropriate to program educational objectives;
- e. an ability to function effectively as a member or leader on a technical team;
- f. an ability to identify, analyze, and solve broadly-defined electrical engineering technology problems;
- g. an ability to apply written, oral, and graphical communication in both technical and non-technical environments; and an ability to identify and use appropriate technical literature;
- h. an understanding of the need for and an ability to engage in self-directed continuing professional development;
- i. an understanding of and a commitment to address professional and ethical responsibilities including a respect for diversity;
- j. a knowledge of the impact of engineering technology solutions in a societal and global context; and
- k. a commitment to quality, timeliness, and continuous improvement.

Completion Requirements

Students seeking the Bachelor of Electrical Engineering Technology degree must successfully complete the following minimum requirements:

1. A minimum of 146 credits, as follows:
 - a. A minimum requirement of 92 credits of the program major as follows:
 - a minimum of 77 core courses including Work Placement for 16 weeks
 - a minimum of 15 credits in the electives of the major
 - b. A minimum requirement of 21 credits of Math and Science courses
 - c. A minimum requirement of 33 credits in General Studies according to the General Studies breakdown and as advised in the study plan of the program.
2. A minimum CGPA of 2.00.

Diploma in Electrical Engineering Technology (DELET)

Program Mission

Working in partnership with industry, the Diploma in Electrical Engineering Technology program provides quality education that prepares highly skilled technicians capable of serving the community and fulfilling personal ambitions with excellence. Graduates may choose to continue into the additional two years of the program to become innovative engineers.

Program Educational Objectives

The Program Educational Objectives of the Diploma in Electrical Engineering Technology program are to:

1. Provide electrical engineering professionals with the technical knowledge and skills required by the industry to develop, design, and maintain electrical systems to highest level of industry standards.
2. Prepare graduates for a successful career as effective decision makers with strong communication and teamwork skills and an understanding of the global, ethical and social implications of the industry and Electrical Engineering profession.
3. Provide graduates with strong commitment to lifelong learning, continuing education, and professional growth.
4. Provide graduates with leadership qualities and commitment to contribute actively to achieving the Abu Dhabi Vision 2030.

Program Learning Outcomes

Upon graduation, a HCT graduate in Diploma in Electrical Engineering Technology should demonstrate:

- a. an ability to apply the knowledge, techniques, skills, and modern tools of electrical engineering to narrowly defined engineering technology activities;
- b. an ability to apply a knowledge of mathematics, science, engineering, and technology to electrical engineering technology problems that require limited application of principles but extensive practical knowledge;
- c. an ability to conduct standard tests and measurements, and to conduct, analyze, and interpret experiments;
- d. an ability to function effectively as a member of a technical team;
- e. an ability to identify, analyze, and solve narrowly defined engineering technology problems;
- f. an ability to apply written, oral, and graphical communication in both technical and non-technical environments; and an ability to identify and use appropriate technical literature;
- g. an understanding of the need for and an ability to engage in self-directed continuing professional development;
- h. an understanding of and a commitment to address professional and ethical responsibilities, including a respect for diversity; and
- i. a commitment to quality, timeliness, and continuous improvement.

Completion Requirements

Students seeking the Diploma in Electrical Engineering Technology degree must successfully complete the following minimum requirements:

1. A minimum of 81 credits, as follows:
 - A minimum requirement of 39 credits of the program major, including Work Placement for 8 weeks
 - A minimum requirement of 15 credits in Math and Science courses.
 - A minimum requirement of 27 credits in General Studies according to the General Studies breakdown.
2. A minimum CGPA of 2.00.

Core Courses

Required Credits: 39

EGN 1133	Design Thinking in Technology	3
EGN 2806	Work Placement I	6
ELE 2114	Electrical Circuits	4

Department of Industrial Engineering Technology (IET)

Bachelor of Industrial Engineering Technology (BINET)

Program Mission

Prepare graduates to be successful as technicians and engineers embracing innovation and discovery and striving for life-long learning and professional development in the field of Industrial Engineering Technology.

Program Description

Bachelor of Industrial Engineering Technology provides an excellent broad education with multidisciplinary specializations to cater for the global UAE industry. The HCT Industrial Engineering Technology program aims to produce high-quality engineers with qualities of productivity, timeliness, dedication, and competence in the workplace. Graduates are expected to have the ability to work logically, accurately and efficiently; to gather and use information effectively; and to continue enhancing their careers through lifelong learning. Moreover, the program is designed to prepare interested students for graduate studies in Industrial Engineering Technology and other areas of professional practice. To this end, Industrial Engineering Technology students are trained to support the analysis, design, development and improvement of manufacturing and service systems from quality, productivity, financial and safety perspectives. The Bachelor of Industrial Engineering Technology curriculum stresses the effective use of technology, information resources and engineering tools; students are trained to use state of the art software packages necessary to facilitate their efforts to optimize, statistically analyze and simulate existing systems, and to test and validate potential gains attainable from improving the system. In addition, the program instills leadership qualities based on moral and ethical principles coupled with sound and rational judgment.

This program offers elective concentrations in Manufacturing & Supply Chain and Logistics & Transportation. Students will have the option to graduate with a Diploma in Industrial Engineering Technology upon the successful completion of 79 credits inclusive of the 8 week Work Placement.

Program Educational Objectives

The Program Educational Objectives of the Bachelor of Industrial Engineering Technology program at HCT is to produce graduates who will:

1. Integrate their attained knowledge and skills with their job expertise to identify and solve problems, and to optimize the interactions among elements of the systems within their area of practice to enhance safety, quality and productivity.

2. Practice their roles in serving their organizations and community with firm commitment to social values and professional ethics.
3. Continue improve their personal and professional abilities through self and administrated learning and training related to their job functions for continual professional growth.
4. Serve as future team leaders with effective professional communication and technical skills and contribute actively to achieving Abu Dhabi Vision 2030.

Program Learning Outcomes

Upon graduation, a HCT graduate in Bachelor of Industrial Engineering Technology should demonstrate:

- a. an ability to select and apply the knowledge, techniques, skills, and modern tools of industrial engineering to broadly-defined engineering technology activities;
- b. an ability to select and apply a knowledge of mathematics, science, engineering, and technology to industrial engineering technology problems that require the application of principles and applied procedures or methodologies;
- c. an ability to conduct standard tests and measurements; to conduct, analyze, and interpret experiments; and to apply experimental results to improve processes;
- d. an ability to design systems, components, or processes for broadly-defined industrial engineering technology problems appropriate to program educational objectives;
- e. an ability to function effectively as a member or leader on a technical team;
- f. an ability to identify, analyze, and solve broadly-defined industrial engineering technology problems;
- g. an ability to apply written, oral, and graphical communication in both technical and non-technical environments; and an ability to identify and use appropriate technical literature;
- h. an understanding of the need for and an ability to engage in self-directed continuing professional development;
- i. an understanding of and a commitment to address professional and ethical responsibilities including a respect for diversity;
- j. a knowledge of the impact of engineering technology solutions in a societal and global context; and
- k. a commitment to quality, timeliness, and continuous improvement.

Completion Requirements

Students seeking the Bachelor of Industrial Engineering Technology degree must successfully complete the following minimum requirements:

1. A minimum of 146 credits, as follows:
 - a. A minimum requirement of 95 credits of the program major as follows:
 - a minimum of 80 credits of the program major, including Work Placement for 16 weeks.
 - a minimum of 15 credits in electives of the major.
 - b. A minimum of 18 credits in Math and Sciences courses.
 - c. A minimum of 33 credits in General Studies according to the General Studies breakdown.
2. A minimum CGPA of 2.00.

Course Credits

Department of Logistics Engineering Technology (LGET)

Bachelor of Logistics Engineering Technology (BLGET)

Program Mission

Prepare graduates to be successful as technicians and engineers embracing innovation and discovery and striving for life-long learning and professional development in the field of Logistics Engineering Technology.

Program Description

Bachelor of Logistics Engineering Technology provides an excellent broad education with specializations to cater to the global UAE logistics industry. The HCT Logistics Engineering Technology program aims to produce high-quality engineers with qualities of productivity, timeliness, dedication, and competence in the workplace. Graduates are expected to have the ability to work logically, accurately and efficiently; to gather and use information effectively; and to continue enhancing their careers through lifelong learning. Moreover, the program is designed to prepare interested students for graduate studies in logistics engineering technology and other areas of professional practice. To this end, Logistics Engineering Technology students are trained to support the analysis, design, development and improvement of logistics systems in the manufacturing and service arenas. The Bachelor of Logistics Engineering Technology curriculum stresses the effective use of technology, information resources and engineering tools; students are trained to use state of the art software packages necessary to facilitate their efforts to analyze and optimize existing systems, and to test and validate potential gains attainable from improving the system. In addition, the program instills leadership qualities based on moral and ethical principles coupled with sound and rational judgment.

Students will have the option to graduate with a Diploma in Logistics Engineering Technology upon the successful completion of 81 credits inclusive of the 8 week Work Placement.

Program Educational Objectives

The Program Educational Objectives of the Bachelor of Logistics Engineering Technology program are to:

1. Provide logistics professionals with the technical knowledge and skills required by the industry to highest level of standards.
2. Prepare graduates for a successful career as effective decision makers with strong communication and teamwork skills and an understanding of the global, ethical and social implications of engineering profession.
3. Teach graduates strong commitment to lifelong learning, continuing education, and professional growth.
4. Instill graduates with leadership qualities and commitment to contribute actively to their profession.

Program Learning Outcomes

Upon graduation, a HCT graduate in Bachelor of Logistics Engineering Technology should demonstrate:

- a. an ability to select and apply the knowledge, techniques, skills, and modern tools of logistics engineering to broadly-defined engineering technology activities;
- b. an ability to select and apply a knowledge of mathematics, science, engineering, and technology to logistics engineering technology problems that require the application of principles and applied procedures or methodologies;
- c. an ability to conduct standard tests and measurements; to conduct, analyze, and interpret experiments; and to apply experimental results to improve processes;
- d. an ability to design systems, components, or processes for broadly-defined logistics engineering technology problems appropriate to program educational objectives;
- e. an ability to function effectively as a member or leader on a technical team;
- f. an ability to identify, analyze, and solve broadly-defined logistics engineering technology problems;
- g. an ability to apply written, oral, and graphical communication in both technical and non-technical environments; and an ability to identify and use appropriate technical literature;
- h. an understanding of the need for and an ability to engage in self-directed continuing professional development;
- i. an understanding of and a commitment to address professional and ethical responsibilities including a respect for diversity;
- j. a knowledge of the impact of engineering technology solutions in a societal and global context; and
- k. a commitment to quality, timeliness, and continuous improvement.

Completion Requirements

Students seeking the Bachelor of Logistics Engineering Technology degree must successfully complete the following minimum requirements:

1. A minimum of 146 credits, as follows:
 - a. A minimum requirement of 95 credits of the program major as follows:
 - a minimum of 83 core courses including Work Placement for 16 weeks
 - a minimum of 12 credits of program major electives.
 - b. A minimum requirement of 18 credits in Math and Science courses.
 - c. A minimum requirement of 33 credits in General Studies according to the General Studies breakdown and as advised in the study plan of the program.
2. A minimum CGPA of 2.00.

Diploma in Logistics Engineering Technology (DLGET)

Program Mission

Working in partnership with industry, the Diploma in Logistics Engineering Technology program provides quality education that prepares highly skilled technicians capable of serving the community and fulfilling personal ambitions with excellence. Graduates may choose to continue into the additional two years of the program to become innovative engineers.

Program Educational Objectives

The Program Educational Objectives of the Diploma in Logistics Engineering Technology program are to:

1. Provide logistics professionals with the technical knowledge and skills required by the industry to highest level of standards.
2. Prepare graduates for a successful career as effective decision makers with strong communication and teamwork skills and an understanding of the global, ethical and social implications of engineering profession.
3. Teach graduates strong commitment to lifelong learning, continuing education, and professional growth.
4. Instill graduates with leadership qualities and commitment to contribute actively to their profession.

Program Learning Outcomes

Upon graduation, a HCT graduate in Diploma in Logistics Engineering Technology should demonstrate:

- a. an ability to apply the knowledge, techniques, skills, and modern tools of logistics engineering to narrowly defined engineering technology activities;
- b. an ability to apply a knowledge of mathematics, science, engineering, and technology to logistics engineering technology problems that require limited application of principles but extensive practical knowledge;
- c. an ability to conduct standard tests and measurements, and to conduct, analyze, and interpret experiments;
- d. an ability to function effectively as a member of a technical team;
- e. an ability to identify, analyze, and solve narrowly defined logistics engineering technology problems;
- f. an ability to apply written, oral, and graphical communication in both technical and non-technical environments; and an ability to identify and use appropriate technical literature;
- g. an understanding of the need for and an ability to engage in self-directed continuing professional development;
- h. an understanding of and a commitment to address professional and ethical responsibilities, including a respect for diversity; and
- i. a commitment to quality, timeliness, and continuous improvement.

Completion Requirements

Students seeking the Diploma in Logistics Engineering Technology degree must successfully complete the following minimum requirements:

1. A minimum of 81 credits, as follows:
 - 39 credits of the program major requirements, including Work Placement for 8 weeks
 - A minimum requirement of 15 credits in Math and Science courses
 - A minimum requirement of 27 credits in General Studies according to the General Studies breakdown and as advised in the study plan of the program.
2. A minimum CGPA of 2.00.

Department of Maritime Studies (MAR)

Bachelor of Applied Science in Marine Engineering Technology

Program Mission

The mission of the degree program is to give education and training to cadets to enable them to pursue a career as a marine engineering officer at sea.

The degree program includes the required academic component for the certificates of competency up to Chief Engineer's level. These certificates will be issued by the Federal Transport Authority once the cadets have sufficient seagoing experience.

Program Description

This programme educates students in the field of Marine Engineering Technology, to prepare them to work in a wide range of maritime related industries in the UAE including: the offshore industry; shipyards; classifications societies; ship design consultancies; ship owners, and ports.

Program Learning Outcomes

Upon graduation, a HCT graduate in Bachelor of Applied Science in Marine Engineering Technology should have the ability to:

- Demonstrate the competency to undertake the tasks, duties and responsibilities of a ship's chief engineer
- Demonstrate a knowledge base in relevant marine related topics suitable for a career as a marine professional
- Effectively lead, work and communicate in a team
- Expand knowledge and capabilities through continuing education or other lifelong learning experiences

Completion Requirements

Students seeking the Bachelor of Applied Science in Marine Engineering Technology must successfully complete the following requirements:

- Minimum of 169 credits which are divided as follows:
 - Major requirements of 100 credits as specified by program core requirements.
 - General Engineering Core Courses: 6 credits.
 - Sea Time Courses: 30 credits.
 - General Studies requirements of 33 credits according to the General Studies breakdown.
- Minimum CGPA of 2.00.

Bachelor of Applied Science in Marine Transport

Program Mission

The mission of the degree program is to give education and training to cadets to enable them to pursue a career as a navigating officer at sea. The degree includes the required academic component for the certificates of competency up to Master's level. These certificates will be issued by the Federal Transport Authority once the cadets have sufficient seagoing experience.

Program Description

Accredited by the Commission for Academic Accreditation (CAA) UAE. This program provides students with the necessary education and training to become a navigating (deck) officer onboard ships. It covers the academic components required by the Standards of Training, Certification and Watch Keeping for Seafarers (STCW) international convention of the International Maritime Organization (IMO) up to Master's level. The program also includes practical seagoing service with guided study, and provided sufficient sea service is obtained by the end of the third year Students can apply to the Federal Transport Authority for the Certificate of Competency as Officer of the Watch. In order to obtain higher level Certificates of Competency, students will be required to complete the degree program in full and, undertake further seagoing service and apply to the Federal Transport Authority.

Program Learning Outcomes

Upon graduation, a HCT graduate in Bachelor of Applied Science in Marine Transport should have the ability to:

- Demonstrate the competency to undertake the tasks, duties and responsibilities of a ship's master
- Demonstrate a knowledge base in relevant marine related topics suitable for a career as a marine professional
- Effectively lead, work and communicate in a team
- Expand knowledge and capabilities through continuing education or other lifelong learning experiences

Completion Requirements

Students seeking the Bachelor of Applied Science in Marine Transport must successfully complete the following requirements:

- Minimum of 163 credits which are divided as follows:
 - Marine Transport Core Courses: 100 credits.
 - Seagoing Service Core Courses: 30 credits.
 - General Studies: 33 credits
- Minimum CGPA of 2.00

Bachelor of Applied Science in Maritime Engineering Technology and Naval Architecture

Program Mission

The mission of the program is to provide knowledge and skills to students in the field of Maritime Engineering and Naval Architecture, to prepare them to contribute to a wide range of maritime related industries in the UAE including: ship building and repair yards; regulatory authorities; classifications societies; ship design consultancies; ship owners, and ports.

Program Description

This program educates students in the field of Maritime Engineering Technology and Naval Architecture, to prepare them to work in a wide range of maritime related industries in the UAE including: the offshore industry; shipyards; classifications societies; ship design consultancies; ship owners, and ports.

Program Learning Outcomes

Upon graduation, a HCT graduate in Bachelor of Applied Science in Maritime Engineering Technology and Naval Architecture should have the ability to:

- Carry out a wide range of maritime engineering and ship design functions
- Analyze the performance of ships and maritime structures
- Conduct ship surveys
- Effectively lead, work and communicate in a team
- Expand knowledge and capabilities through continuing education or other lifelong learning experiences
- Serve the community, whether locally, nationally, or globally

Completion Requirements

Students seeking the Bachelor of Applied Science in Maritime Engineering Technology and Naval Architecture must successfully complete the following requirements:

- Minimum of 139 credits which are divided as follows:
 - Major requirements of 32 credits as specified by program core requirements
 - Elective Course requirements of 12 credits
 - Mathematics and Science Course requirements of 21 credits
 - General Engineering requirements of 41 credits
 - General Studies requirements of 33 credits according to the General Studies breakdown
- Minimum CGPA of 2.00.

Course Credits

Maritime Engineering and Naval Architecture Core Courses		
Required Credits: 32		
MAR 2203	Naval Architecture	3
MAR 3103	Marine Machinery Systems	3
MAR 3202	Ship Production	2
MAR 3303	Resistance and Propulsion	3
MAR 3402	Ship Structures I	2
MAR 3503	Design of Ships and Maritime Structures	3
MAR 4805	Maritime Design Project I	5
MAR 4833	Seakeeping and Manoeuvring	3
MAR 4865	Maritime Design Project II	5
MAR 4883	Maritime Transportation	3

Maritime Engineering and Naval Architecture Elective Courses		
Required Credits: 12		
MAR 4423	Coastal Engineering and Maritime Structures	3
MAR 4433	Offshore Engineering	3
MAR 4443	Ship Production II	3
MAR 4453	Ship Repair	3
MAR 4463	Port Engineering	3
MAR 4803	Ship Structures II	3
MAR 4853	Marine Surveying	3
MAR 4903	Marine Safety	3

Mathematics and Science Required Courses		
Required Credits: 21		
CHM 1103	Engineering Chemistry	3
MTH 1103	Pre Calculus	3
MTH 1203	Calculus I	3
MTH 2103	Calculus II	3
MTH 2503	Linear Algebra and Differential Equations	3
MTH 3013	Calculus III	3
PHY 1203	Physics II	3

Course Credits

General Engineering Core Courses**Required Credits: 41**

ELE 2153	Electrical Engineering Fundamentals	3
EGN 1133	Design Thinking in Technology	3
EGN 3012	Project Management	2
EGN 3212	Economics for Engineering	2
EGN 2101	Computer Aided Drafting	1

Faculty

ABU DHABI MEN'S

Lalin De Silva, Masters Maritime Education and Training (Nautical), World Maritime University

Saud Zambarkji, Masters High Sea's, Arab Academy for Science and Technology and Maritime Transport

Department of Mathematics and Natural Sciences

Math and Natural Sciences

Program Mission

The Department of Mathematics and Natural Sciences are committed to serving the needs of the Engineering departments by providing quality education. Emphasis is on using the latest digital courseware, innovation and the application of scientific and technical knowledge to solve real-world problems. The courses are designed to cover both, the conceptual and the practical aspects of learning by providing the students with the right tools that will allow them to enter a career in higher education, industry or government.

Program Description

The Math and Sciences offer courses in Math, Physics, and Chemistry. These courses are part of the core curriculum and fulfil the requirements in the various degrees offered within the Faculty of Engineering Technology and Science. Emphasis is on innovation and the application of scientific and technical knowledge to solve human problems.

Program Educational Objectives

The Program Educational Objectives of the Department of Mathematics and Natural Sciences are:

1. Develop a firm understanding of the fundamental principles and application of Physics, Mathematics, and Chemistry.
2. Ability to apply basic statistics, calculus, differential equations, and linear techniques
3. Ability to identify, analyze, and solve applied science problems.
4. Develop the students' ability to communicate and work in teams

Faculty

AL AIN MEN'S

Eyad Adnan, Masters Mathematics, University of Karachi
Ghassan Malkawi, PhD Mathematics, Universiti Utara Malaysia
Riyad Hussein, PhD Physics, University of Strathclyde

AL AIN WOMEN'S

Andrew Nyondo, Masters Mathematics, University of London
Bogdan Schiopu, Masters Management, Universitatea Petrol, Gaze Ploiesti
Haroun Barghouthy, Masters Physics, University of Jordan

ABU DHABI MEN'S

Abdel-Razzaq Mugdadi, PhD Mathematical Sciences, Northern Illinois University
Aykut Ulge, Masters Mechanical Engineering, Bosphorus University
Brittany Mitchell, Masters Atmospheric and Space Science, University of Michigan
Dorian Bridi, PhD Engineering Physics, Vienna University of Technology
Hyun Yeun, PhD Mathematics, The University of Sheffield
Jamal Fakh, Master of Science Civil Engineering, University of Toledo
Kattayat Sandhya, Masters Physics, University Of Calicut
Khaled Manasrah, PhD Mathematics, Southern Illinois University
Khaled Shawakfeh, PhD Chemistry, Temple University
Manuel Eusebio, PhD Science Education (Mathematics), De la Salle University
Manuela Zarifeh, Masters Civil Engineering, Concordia University
Marianne Tarun, PhD Materials Science and Engineering, Washington State University
Nabila Azzam, PhD Mathematics, University of Manchester
Osman Elawad, PhD Science-Material Physics, University of Claude Bernard
Renuka Seenivasan, PhD Physics, Bharathidasan University
Roque Batulan, PhD Mathematics Education, Centro Escolar University
Ziad Rafhi, Masters Statistics, Business and Computer University

ABU DHABI WOMEN'S

Department of Mechanical Engineering Technology (MCET)

Bachelor of Mechanical Engineering Technology (BMCET)

Program Mission

Prepare graduates to be successful as technicians and engineers embracing innovation and discovery and striving for life-long learning and professional development in the field of Mechanical Engineering Technology.

Program Description

The Bachelor of Mechanical Engineering Technology program provides an excellent broad education with a focused area of specialization options to cater for the global UAE industry. Mechanical engineering technology graduates are trained to support the design, development, and maintenance of mechanical, static as well as rotating equipment. The program also teaches them to develop effective energy solutions, and manufacture and maintain state of the art equipment. HCT Mechanical engineers are trained to use state of the art software and hardware to rapidly prototype and test potential product design, computerized testing and measurements, and computer control of machinery. The Bachelor of Mechanical Engineering Technology curriculum produces high-quality engineers known for productivity, timeliness, dedication, and competence in the workplace. Graduates have the ability to work logically, accurately and efficiently; to gather and use information effectively; and to continue enhancing their careers through lifelong learning. The program stresses the effective use of technology, information resources and engineering tools. The program instills leadership qualities based on moral and ethical principles coupled with sound and rational judgment. Finally, the program is designed to prepare interested students for graduate studies in mechanical engineering technology and other areas of professional practice.

This program offers elective concentrations in Power and Design and Manufacturing. Students will have the option to graduate with a Diploma Mechanical in Engineering Technology upon the successful completion of 81 credits inclusive of the 8 week Work Placement.

Program Educational Objectives

The Program Educational Objectives of the Bachelor of Mechanical Engineering Technology program are to:

1. Provide Mechanical Engineering professionals who are equipped with the technical knowledge and skills required by the industry to develop, design, and maintain mechanical systems to highest level of industry standards.
2. Prepare graduates for a successful career as effective decision makers with strong communication and

teamwork skills and an understanding of the global, ethical and social implications of the industry and Mechanical Engineering profession.

3. Provide graduates with strong commitment to lifelong learning, continuing education, and professional growth.
4. Provide graduates with leadership qualities and commitment to contribute actively to achieving the Abu Dhabi Vision 2030.

Program Learning Outcomes

Upon graduation, a HCT graduate in Bachelor of Mechanical Engineering Technology should demonstrate:

- a. an ability to select and apply the knowledge, techniques, skills, and modern tools of mechanical engineering to broadly-defined engineering technology activities;
- b. an ability to select and apply a knowledge of mathematics, science, engineering, and technology to mechanical engineering technology problems that require the application of principles and applied procedures or methodologies;
- c. an ability to conduct standard tests and measurements; to conduct, analyze, and interpret experiments; and to apply experimental results to improve processes;
- d. an ability to design systems, components, or processes for broadly-defined mechanical engineering technology problems appropriate to program educational objectives;
- e. an ability to function effectively as a member or leader on a technical team;
- f. an ability to identify, analyze, and solve broadly-defined mechanical engineering technology problems;
- g. an ability to apply written, oral, and graphical communication in both technical and non-technical environments; and an ability to identify and use appropriate technical literature;
- h. an understanding of the need for and an ability to engage in self-directed continuing professional development;
- i. an understanding of and a commitment to address professional and ethical responsibilities including a respect for diversity;
- j. a knowledge of the impact of engineering technology solutions in a societal and global context; and
- k. a commitment to quality, timeliness, and continuous improvement.

Completion Requirements

Students seeking the Bachelor of Mechanical Engineering Technology degree must successfully complete the following minimum requirements:

1. A minimum of 146 credits, as follows:
 - a. A minimum 92 credits of program major requirements as follows:

- a minimum of 74 core courses including Work Placement for 16 weeks
 - a minimum of 18 credits of program major electives
- b. A minimum requirement of 21 credits in Math and Science courses.
- c. A minimum requirement of 33 credits in General Studies, according to the General Studies breakdown and as advised in the study plan of the program.
2. A minimum CGPA of 2.00.

Diploma in Mechanical Engineering Technology (DMCET)

Program Mission

Working in partnership with industry, the Diploma in Mechanical Engineering Technology program provides quality education that prepares highly skilled technicians capable of serving the community and fulfilling personal ambitions with excellence. Graduates may choose to continue into the additional two years of the program to become innovative engineers.

Program Educational Objectives

The Program Educational Objectives of the Diploma in Mechanical Engineering Technology program are to:

1. Provide Mechanical Engineering professionals who are equipped with the technical knowledge and skills required by the industry to maintain mechanical systems to highest level of industry standards.
2. Prepare graduates for a successful career with strong communication and teamwork skills and an understanding of the global, ethical and social implications of the industry and Mechanical Engineering profession.
3. Provide graduates with strong commitment to lifelong learning, continuing education, and professional growth.
4. Provide graduates with the commitment to contribute actively to achieving the Abu Dhabi Vision 2030.

Program Learning Outcomes

Upon graduation, a HCT graduate in Diploma in Mechanical Engineering Technology should demonstrate:

- a. an ability to apply the knowledge, techniques, skills, and modern tools of mechanical engineering to narrowly defined engineering technology activities;
- b. an ability to apply a knowledge of mathematics, science, engineering, and technology to mechanical engineering technology problems that require limited application of principles but extensive practical knowledge;
- c. an ability to conduct standard tests and measurements, and to conduct, analyze, and interpret experiments;
- d. an ability to function effectively as a member of a technical team;
- e. an ability to identify, analyze, and solve narrowly defined mechanical engineering technology problems;
- f. an ability to apply written, oral, and graphical communication in both technical and non-technical environments; and an ability to identify and use appropriate technical literature;
- g. an understanding of the need for and an ability to engage in self-directed continuing professional development;
- h. an understanding of and a commitment to address professional and ethical responsibilities, including a respect for diversity; and
- i. a commitment to quality, timeliness, and continuous improvement.

Completion Requirements

Students seeking the Diploma in Mechanical Engineering Technology degree must successfully complete the following

minimum requirements:

1. A minimum of 81 credits, as follows:
 - a. a minimum requirement of 39 credits in the program major, including Work Placement for 8 weeks
 - b. a minimum requirement of 15 credits in Math and Science courses.
 - c. a minimum requirement of 27 credits in General Studies, according to the General Studies breakdown and as advised in the study plan of the program.
2. A minimum CGPA of 2.00.

Department of Mechatronics Engineering Technology (MTET)

Bachelor of Mechatronics Engineering Technology (BMTET)

Program Mission

Prepare graduates to be successful as technicians and engineers embracing innovation and discovery and striving for life-long learning and professional development in the field of Mechatronics Engineering Technology.

Program Description

The Bachelor of Mechatronics Engineering Technology program provides an excellent broad education with a focused area of specializations options to cater for the global UAE industry. Mechatronics engineering technology graduates are trained to support design, development, and maintenance of mechatronics systems, develop effective solutions of industrial needs, and manufacture and maintain state of the art automated systems. HCT Mechatronics engineers are trained to use state of the art software and hardware to rapidly prototype and test potential product design, computerized testing and measurements, and computer control of machinery. The Bachelor of Mechatronics Engineering Technology curriculum produces high-quality engineers known for productivity, timeliness, dedication, and competence in the workplace. Graduates have the ability to work logically, accurately and efficiently; to gather and use information effectively; and to continue enhancing their careers through lifelong learning. The program stresses the effective use of technology, information resources and engineering tools. The program instills leadership qualities based on moral and ethical principles coupled with sound and rational judgment. Finally, the program is designed to prepare interested students for graduate studies in mechatronics engineering and other areas of professional practice.

Students will have the option to graduate with a Diploma in Mechatronics Engineering Technology upon the successful completion of 81 credits inclusive of the 8 week Work Placement.

Program Educational Objectives

The Program Educational Objectives of the Bachelor of Mechatronics Engineering Technology program are to:

1. Provide Mechatronics engineering professionals with the technical knowledge and skills required by the industry to develop, design, and maintain mechatronics systems to highest level of industry standards.
2. Prepare graduates for a successful career as effective decision makers with strong communication and teamwork skills and an understanding of the global, ethical and social implications of the industry and Mechatronics Engineering profession.
3. Provide graduates with strong commitment to lifelong learning, continuing education, and professional growth.
4. Provide graduates with leadership qualities and commitment to contribute actively to achieving the Abu Dhabi Vision 2030.

Program Learning Outcomes

Upon graduation, a HCT graduate in Bachelor of Mechatronics Engineering Technology should demonstrate:

- a. an ability to select and apply the knowledge, techniques, skills, and modern tools of mechatronics engineering to broadly-defined engineering technology activities;
- b. an ability to select and apply a knowledge of mathematics, science, engineering, and technology to mechatronics engineering technology problems that require the application of principles and applied procedures or methodologies;
- c. an ability to conduct standard tests and measurements; to conduct, analyze, and interpret experiments; and to apply experimental results to improve processes;
- d. an ability to design systems, components, or processes for broadly-defined mechatronics engineering technology problems appropriate to program educational objectives;
- e. an ability to function effectively as a member or leader on a technical team;
- f. an ability to identify, analyze, and solve broadly-defined mechatronics engineering technology problems;
- g. an ability to apply written, oral, and graphical communication in both technical and non-technical environments; and an ability to identify and use appropriate technical literature;
- h. an understanding of the need for and an ability to engage in self-directed continuing professional development;
- i. an understanding of and a commitment to address professional and ethical responsibilities including a respect for diversity;
- j. a knowledge of the impact of engineering technology solutions in a societal and global context; and
- k. a commitment to quality, timeliness, and continuous improvement.

Completion Requirements

Students seeking the Bachelor of Mechatronics Engineering Technology degree must successfully complete the following minimum requirements:

1. A minimum of 146 credits, as follows:
 - a. A minimum requirement of 92 credits in program major as follows:
 - a minimum of 80 core courses including Work Placement for 16 weeks
 - a minimum of 12 credits in electives of the program major
 - b. A minimum requirement of 21 credits in Math and Science courses.
 - c. A minimum requirement of 33 credits in General Studies, according to the General Studies breakdown and as advised in the study plan of the program.
2. A minimum CGPA of 2.00.

Course Credits

Core Courses

Required credits: 80

EGN 1133	Design Thinking in Technology	3
EGN 2712	Applied Programing for Engineers	2
EGN 2806	Work Placement I	6
EGN 3012	Project Management	2
EGN 3212	Economics for Engineering	2
EGN 3806	Work Placement II	6
ELE 2153	Electrical Engineering Fundamentals	3
MCE 2203	Applied Statics	3
MCE 2213	Mechanics of Materials	3
MCE 2223	Applied Dynamics	3
MCE 2303	Material Selection and Testing	3
MCE 2311	Solid Modelling	1
MCE 2323	Manufacturing Technology I	3
MCE 3203	Applied Mechanical Vibrations	3
MCE 3503	Mechanical Design	3
MCE 4603	Control Systems	3
MTE 2403	Thermofluid Systems	3
MTE 2602	Mechatronics Measurements and Troubleshooting	2
MTE 2903	Sophomore Design Project	3
MTE 3503	Electronics Product Design	3
MTE 3603	Electronics Systems and Circuits	3
MTE 3611	Electronics Systems and Circuits Lab	1
MTE 3623	Microcontroller Systems	3
MTE 3633	Sensors and Actuators	3
MTE 4603	Robotics Technology	3
MTE 4613	Industrial Control Systems	3
MTE 4902	Capstone Design Project I	2
MTE 4912	Capstone Design Project II	2

Major Elective Courses

Required Credits: 12

MCE 3343	Industrial Plant Maintenance	3
MCE 3613	Fluid Power	3
MTE 4503	Design of Mechatronic Systems	3
MTE 4623	Industrial Automation	3
MTE 4633	Process Control	3
MTE 4643	Digital Control Systems	3
MTE 4653	Real Time Embedded Systems	3
MTE 4863	Special Topics in Mechatronics Engineering	1 to 3
MTE 4893	Directed Study	1 to 3

Course Credits

Mathematics and Science courses

Required credits: 21

CHM 1103	Engineering Chemistry	3
MTH 1103	Pre Calculus	3
MTH 1203	Calculus I	3
MTH 2103	Calculus II	3
MTH 2503	Linear Algebra and Differential Equations	3
MTH 3013	Calculus III	3
PHY 1203	Physics II	3

General Studies courses

Required credits: 33

English, Arabic or other Languages	12
Humanities or Arts: AES 1003 Emirati Studies	3
Information Technology and Mathematics: ICT 2013 and MTH 1113	6
The Natural Sciences: PHY 1103 Physics-I	3
The Social or Behavioral Sciences	9

<i>Total Required Credits</i>	<i>146</i>
<i>Maximum Duration of Study</i>	<i>6 years</i>
<i>Cost Recovery Program</i>	<i>No</i>
<i>Minimum Duration of Study</i>	<i>4 years</i>

<i>Major Code</i>	<i>MTE</i>

Diploma in Mechatronics Engineering Technology (DMTET)

Diploma in Mechatronics Engineering Technology (DMTET)

Program Mission

Working in partnership with industry, the Diploma in Mechatronics Engineering Technology program provides quality education that prepares highly skilled technicians capable of serving the community and fulfilling personal ambitions with excellence. Graduates may choose to continue into the additional two years of the program to become innovative engineers.

Program Educational Objectives

The Program Educational Objectives of the Diploma in Mechatronics Engineering Technology program are to:

1. Provide Mechatronics engineering professionals with the technical knowledge and skills required by the industry to maintain mechatronics systems to highest level of industry standards.
2. Prepare graduates for a successful career with strong communication and teamwork skills and an understanding of the global, ethical and social implications of the industry and Mechatronics Engineering profession.
3. Provide graduates with strong commitment to lifelong learning, continuing education, and professional growth.
4. Provide graduates with the commitment to contribute actively to achieving the Abu Dhabi Vision 2030.

Program Learning Outcomes

Upon graduation, a HCT graduate in Diploma in Mechatronics Engineering Technology should demonstrate:

- a. an ability to apply the knowledge, techniques, skills, and modern tools of mechatronics engineering to narrowly defined engineering technology activities;
- b. an ability to apply a knowledge of mathematics, science, engineering, and technology to mechatronics engineering technology problems that require limited application of principles but extensive practical knowledge;
- c. an ability to conduct standard tests and measurements, and to conduct, analyze, and interpret experiments;
- d. an ability to function effectively as a member of a technical team;
- e. an ability to identify, analyze, and solve narrowly defined mechatronics engineering technology problems;
- f. an ability to apply written, oral, and graphical communication in both technical and non-technical environments; and an ability to identify and use appropriate technical literature;
- g. an understanding of the need for and an ability to engage in self-directed continuing professional development;
- h. an understanding of and a commitment to address professional and ethical responsibilities, including a respect for diversity; and
- i. a commitment to quality, timeliness, and continuous improvement.

Completion Requirements

Students seeking the Diploma in Mechatronics Engineering Technology degree must successfully complete the following

minimum requirements:

1. A minimum of 81 credits, as follows:
 - A minimum of 39 credits of the program major requirements, including Work Placement for 16 weeks
 - A minimum of 15 credits in Math and Science courses.
 - A minimum of 27 credits in General Studies, according to the General Studies breakdown and as advised in the study plan of the program.
2. A minimum CGPA of 2.00.
